Section B: Short Questions with Answers

1. Differentiate between <head> and <body> tags using one example each.

Answer: <head> contains metadata like <title>, while <body> contains visible content like <p>.

2. Identify whether the code is correct or wrong:

<!doctype HTML>

Explain briefly.

Answer: Correct. HTML is case-insensitive.

3. Predict the output:

<h1>Title</h1><p>Text</p>

Answer: Displays a large heading 'Title' followed by a paragraph 'Text'.

4. Fill the missing tag to define page title:

<____>My Page</____>

Answer: <title>

5. Choose the correct input type for entering an email address.

Answer: email

6. Choose the correct input type for entering a password securely.

Answer: password

7. Choose the correct input type for selecting a date.

Answer: date

8. Given code:

`<input type='text'>`

What kind of data does it accept?

Answer: It accepts single-line textual data.

9. Identify the error:

`<input type='textbox'>`

Answer: 'textbox' is invalid; correct type is 'text'.

10. Fill in the blank to make input mandatory:

`<input type='text' ____>`

Answer: required

11. Explain the purpose of <label> tag in forms.

Answer: It improves accessibility and links text with form controls.

12. Identify correct or wrong:

`<label for='id1'></label>`

`<input id='id1'>`

Answer: Correct. The label is properly associated with input.

13. Predict the behavior:

`<input type='radio' name='class'>`

`<input type='radio' name='class'>`

Answer: Only one option can be selected at a time.

14. Predict the behavior:

`<input type='checkbox'>`

`<input type='checkbox'>`

Answer: Multiple options can be selected.

15. State one use case where checkbox is preferred over radio.

Answer: When multiple selections are allowed.

16. Write HTML code to create a dropdown list.

Answer: `<select><option>Option</option></select>`

17. What is the purpose of <textarea> tag?

Answer: It allows users to enter multi-line text.

18. A form must send data to submit.php. Which attribute is required?

Answer: action attribute

19. Identify error:

<form action>

Explain briefly.

Answer: action attribute value is missing.

20. Predict output:

<input type='text' placeholder='Name'>

Answer: Displays an input box with placeholder text 'Name'

21. A website link should open in a new tab. Write the required HTML code snippet.

Answer: Link

22. Given code:

Home

What will be the output when clicked?

Answer: It opens page.html in the same browser tab.

23. Identify whether the code is correct or wrong:

Google

Answer: Wrong. The correct attribute is href, not link.

24. An image is not displaying. Identify the error:

Answer: The attribute should be src instead of source.

25. Write HTML code to display an image with alternative text.

Answer:

26. State the purpose of the alt attribute in the image tag.

Answer: It provides alternate text when the image fails to load and improves accessibility.

27. Predict the output type:

`<ul><li>Apple</li><li>Mango</li></ul>`

Answer: It displays an unordered (bulleted) list.

28. Which tag is used to create numbered lists? Write a sample.

Answer: `<ol><li>Item</li></ol>`

29. Identify the mistake:

`<ul><li>Item</ul></li>`

Answer: The `<li>` tag must be closed before closing `<ul>`.

30. Given code:

`<tr><td>A</td><td>B</td></tr>`

What does it represent?

Answer: It represents one table row with two data cells.

31. Which attribute is used to merge two columns in a table? Write its usage.

Answer: colspan attribute, e.g., `<td colspan='2'>Data</td>`

32. Identify the error:

`<table><tr><th>Name</td></tr></table>`

Answer: Mismatch of `<th>` and `</td>`. It should be `</th>`.

33. Choose the correct input type for selecting multiple options.

Answer: checkbox

34. Fill in the missing attribute:

`<form ____='submit.php'>`

Answer: action

35. What is the difference between radio and checkbox inputs?

Answer: Radio allows only one selection, checkbox allows multiple selections.
